As a user of a disconnected Satellite, I'd like to change my disconnected Satellite to a connected one.

Description
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1191778
Description of problem:
As a user of a disconnected Satellite 6 installation, I would like the ability to change my disconnected Satellite's CDN URL back to cdn.redhat.com.

Currently today, changing the CDN URL is a one-time event. Once set to NOT cdn.redhat.com, it (and the associated pulp repos) cannot be changed. This RFE requests a means to provide that.

This would allow the ability to initially populate the Satellite using exported CDN content, and then switch the Satellite back to cdn.redhat.com to retrieve the deltas.
