Description

Somehow, after migrating from foreman 1.7.4 to 1.8.2, duplicate interfaces appeared (especially on hosts with virtual nics and bridges).

Trying to remove duplicate interfaces simply does not work.

How to reproduce:

- locate a host with duplicated interfaces (two br0 for example)
- try to remove one of the ‘br0’
- submit
- application complains that one of the ‘br0’ are invalid

Can you share the log from when you submit the form, and/or what the errors are (if shown) on the individual interfaces?

FWIW, I wasn't able to see any errors in the logs when I was having this problem. I'll admit, though, I'm not sure which logs I should be checking. In my instance, I was looking at the foreman production.log in /var/log/foreman as well as the logs in /var/log/foreman-proxy.
