Difficulty:

Bugzilla link: 1213382

Description
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1213382
Description of problem:
katello-service list has discrepancy in listing the output of "katello-service list" as the script check for output of chkconfig for the all the katello services, which of course wouldn't work on the EL7 system as it uses systemd to list unit-files.

Version-Release number of selected component (if applicable):
Satellite 6.0.x and Satellite 6.1
katello-service scripts

How reproducible:
100%

Steps to Reproduce:
1. Install Satellite 6.0.x or Satellite 6.1 Beta
2. Execute "katello-service list"

Actual results:
"katello-service list" command is broken on EL7, which perfectly works in EL6

Expected results:
"katello-service list" should work in EL7 as well.

Additional info:
Checking the /usr/bin/katello-service file we see the below section which checks for the output of chkconfig for list command

```
chkconfig() {
RET=0
E_STAT=0
for service in $SERVICES; do
if [-e /etc/init.d/$service -o -e /lib/systemd/system/$service.service ]; then
/sbin/chkconfig $service "$@
E_STAT=$?
fi
if [ $E_STAT -ne 0 ]; then
RET=$E_STAT
fi
done
return $RET
}
```

History
#1 - 08/01/2015 10:42 AM - Eric Helms
- Release set to Katello 2.3.0
- Triaged changed from No to Yes
