Foreman - Bug #12063
unable to destroy libvirt vm
10/06/2015 02:57 AM - Ohad Levy

Status: Closed
Priority: Normal
Assignee: Michael Moll
Category: Compute resources - libvirt

The bug looks deeper than the stack trace indicates (silenced?), perhaps in ruby-libvirt, but most likely not Foreman.

Same as #9946?

Ohad, what's the status here?

I think this is a problem with virtual machines not created from Foreman. Fog-Libvirt fails to understand volume tags as written by virt-install.

For example, my XML might say:

```
<source dev="/dev/vg1/foobar"/>
```

Fog-libvirt expects the `<source>` tag to have a file attribute though.

The volume metadata is then incomplete:

```
volumes=[<Fog::Compute::Libvirt::Volume
  id=nil,
  pool_name="vg1",
  key=nil,
  name="fog-764556483518616",
  path=nil,
  capacity="10G",
  allocation="1G",
  format_type="raw",
  backing_volume=nil
 />
],
```

Volumes are deleted by key, but as you can see, "key" is nil.
I observe exactly the same.
I had to patch fog as follows:
https://github.com/fog/fog/issues/3285#issuecomment-98696583
to be able to create VMs with Ceph-RBD backed volumes.
However, now I am unable to delete them.

The code snippet in this PR comment against fog-libvirt:
https://github.com/fog/fog-libvirt/pull/56#issuecomment-539211907
fixes my issues, and I plan to upstream it after response on how to proceed.
It also lets RBD volumes show up correctly in foreman with their provisioned and allocated size.

#7 - 10/28/2019 09:04 PM - Oliver Freyermuth
This is now part of fog-libvirt 0.7.0, so all that's left is upgrading the version in Foreman ;-)!
