**Description**

Fog defaults to using 4.0 API revision to connect to vSphere. For features like storage pools or setting the boot order one needs to use at least 5.0. As a user I should be able to configure the api revision Foreman passes to fog.

Fog now chooses the most recent API version by default, see https://github.com/fog/fog-vsphere/pull/3
We might want to show this in the GUI, though.
