**Description**

- Cloned from [https://bugzilla.redhat.com/show_bug.cgi?id=1308931](https://bugzilla.redhat.com/show_bug.cgi?id=1308931)
- Description of problem:
  - domain name value in YAML refers to domain Description instead of DNS domain

**How reproducible:**

- Open the Satellite 6.1.6 web interface
  - Go to Infrastructure --> Domains
  - Click on a domain.
  - A new screen opens with the 'Domain' tab opened. Please note that this tab contains 3 fields: 'DNS domain', 'Description' and 'DNS Capsule'.
  - Now go to Hosts --> All hosts
  - Select a managed host.
  - Click on the YAML button.
  - The YAML file includes a 'domainname' variable. The value of this variable is set to the 'Description' field value just mentioned. However, would expect this variable to be filled with the 'DNS domain' field value.

**Steps to Reproduce:**

1. 
2. 
3. 

**Actual results:**

**Expected results:**
