Unable to reload VMware datacenters when wrong credentials are passed for the first time

When creating a new VMware compute resource in the web UI, if users make a typo in the url or credentials and try to load the datacenters, the process fails, displays an error message and hides the [Load Datacenters] button. Unfortunately the datacenter is required and there's no way how to do another attempt to load them with fixed credentials. The only way out is to reload the whole page and fill in the form again.
