Foreman - Bug #17570

onContentLoad() is called twice on every page

Description

From the jQuery docs:

```
when calling .trigger() with an event name matches the name of a property on the object, prefixed by on (e.g. triggering click on window that has a non null onclick method), jQuery will attempt to invoke that property as a method.
```

When the document loads we trigger a `ContentLoad` event, which causes jQuery to execute the function called `onContentLoad` by default. In addition, we attach a listener to the document that catches the `ContentLoad` event and executes the function as well. We need to either rename the function or remove the extra listener.

**Revision 83afcbec - 12/13/2016 10:26 AM - Tomer Brisker**

Fixes #17570 - Only execute `onContentLoad` once per page

When an event is triggered, jQuery attempts to execute the on<name> method if it exists for event <name>. We were also manually triggering the `onContentLoad` every time the `ContentLoad` event was triggered, leading to the function executing twice on every page. This commit removes the explicit event listener so that the function will only execute once.
