Description

hammer subnet create/update shoupd enable entering dhcp, dns and tftp proxy names.

At the moment it supports just ids:

```
--dhcp-id DHCP_ID
--dns-id DNS_ID
--tftp-id TFTP_ID
```

Dhcp proxy id to use within this subnet
Dns proxy id to use within this subnet
Tftp proxy id to use within this subnet

Three more options should be added: --dhcp, --dns, --tftp The options must accept proxy names and translate them to ids.

See domain command for some inspiration:
