BelongsToHostTaxonomyValidator does not propage issues to host form

09/21/2017 12:08 PM - Ivan Necas

Status: Closed
Priority: Normal
Assignee: Ivan Necas
Category: Unattended installations
Target version: 1.18.0

Description
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1492148

Description of problem:
If BelongsToHostTaxonomyValidator fails, the error message is not visible for the user.
Also, the error messages are logged as [info], which on customer request should be turned to error, and I tent to agree with that.

Associated revisions
Revision cd14c1a9 - 04/06/2018 04:38 PM - Ivan Necas
Fixes #21055 - use _id attributes for host taxonomy validator

Otherwise, the error messages are not visible.
Also log the host error messages as `error` instead of `info`, as it should be more appropriate for this case.
