Description

Hammer defaults to 'base' output adapter if it can't find adapter specified in --output:

```
hammer --output=unknown user list
```

Id: 3
Login: admin
Name: Admin User
Email: root@example.com
Admin: yes

Email: ipa_bob@ipa.test
Admin: no

This is quite confusing behavior, especially when user passes 'yml' instead of the only supported 'yaml'. Both outputs aren't that different at a first glance.

Expected result:
Hammer should end with error instead, informing that the adapter name is unknown and listing the available ones.
