Description

Steps to Reproduce:
1. In web UI, go to Administer -> Roles.
2. Click on a role (e.g. Compliance viewer), and click the Filter tab.
3. Click Edit to edit a filter, and see the Override? and Unlimited? check box.
4. Click the help text icons.

Actual results:

---------

Unlimited
By unchecking this you can specify filter using Foreman search syntax in search field. If filter remains unlimited (this field is checked) it applies on all resources of the selected type. When a role is associated with some locations or organization filter is not consider unlimited as it's scoped accordingly.

---------

Override
Filters inherit locations and organizations from their role by default. If override field is enabled, filter can override the set of its locations and organizations. Later role changes will not affect such filter. After disabling override field, role locations and organizations apply again.

---------

Expected results:

---------

Unlimited
If the unlimited field is enabled, the filter applies to all resources of the selected type. If the unlimited field is disabled, you can specify further filtering using Satellite search syntax in the search field. If the role is associated with locations or organizations, the filters are not considered unlimited as they are scoped accordingly.

---------

Override
Filters inherit the locations and organizations associated with the role by default. If the override field is enabled, the filter can override the set of its locations and organizations. Later role changes will not affect such filter. After disabling the override field, the role locations and organizations apply again.
