Powering on or off a host linked to a VM in vCenter, by pressing the "power <on/off>" button on the host's page, results in the popup:

Failed to stop <hostname here>: uninitialized constant Fog::Compute::Ovirt

The Foreman log contains:

2018-04-11T10:30:40 d293c7e2 [app] [W] Failed to fetch power status

This started happening after upgrading from 1.15.6 to 1.16.1. I do not have any Ovirt compute resources configured, only a VMware one.

Note that the requested power operation still goes through to vCenter, but the page fails to update the power status without refreshing the page (which works without error).

If any workarounds exist I would greatly appreciate knowing about them! (do I need to install foreman-ovirt? I only have the foreman-vmware provider installed)

### Related Issues:

### History

**#1 - 04/12/2018 08:18 AM - Alexander Olofsson**

The issue seems to occur due to the fix for #22546 - https://github.com/theforeman/foreman/commit/a951f9bdbea54cdc2520b2c9177c6ce24aca9e

Since we don't use Ovirt either, a quick fix was to just revert the changes from said patch. A more proper solution would probably be to replace the check with something alike;

```ruby
if Fog::Compute.const_defined?(:Ovirt) && action_status.is_a?(Fog::Compute::Ovirt::Server)
  return true
end
```
#2 - 04/12/2018 08:26 AM - The Foreman Bot
- Status changed from New to Ready For Testing
- Pull request https://github.com/theforeman/foreman/pull/5442 added

#3 - 04/12/2018 08:33 AM - J. A.
Thanks for the quick response! As a temporary workaround I installed the 'foreman-ovirt' package and restarted Foreman, and now the error message is gone.

#4 - 04/12/2018 12:17 PM - Ondřej Pražák
- Legacy Backlogs Release (now unused) set to 297
