Optionally load facter

Facter is currently loaded in a few places. This is always to get the fqdn or domain which can be centralized to settings. It can then detect if those are already hardcoded. The benefit is that facter becomes optional.

Revision c1f2c0bb - 05/22/2018 01:17 PM - Ewoud Kohl van Wijngaarden

The inclusion of facter is technically optional since it's a bundler group. In practice there are direct calls to it.

This change relies on a change in Foreman core to ensure SETTINGS[:fqdn] is set.

The benefit is that you can explicitly set the FQDN in your settings file and avoid the use of the host FQDN altogether. This has the benefit of decoupling from the actual host you run Foreman on.

Revision a653e389 - 05/22/2018 03:18 PM - Ewoud Kohl van Wijngaarden

We have a bundler group for facter. That implies it's optional but before this change it wasn't. With this change it's only required if no domain and fqdn are set. This is still the default so in most cases it's no difference, but at least we have centralized all use of facter to one place.
