Description
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1560672

Description of problem:
Created a role and set Resource type = Host and Search = Config Group. Assign this role to the user and login with the user which is using this customized role. Go to Hosts page, it shows error = Stack level too deep.

Version-Release number of selected component (if applicable):
Satellite 6.2.12

How reproducible:
Always

Steps to Reproduce:
1. Create a config group.
2. Add a role with resource type = Content Host, Host, Host Collection, Location and Host with config_group (Refer Image = 6.2.12.Customers_Filter-1.png)
3. and log in with that user and go to Hosts page in the satellite. We will get Stack level too deep error.

Actual results:
Facing issue = Stack level too deep error

Expected results:
User should be able to view the all hosts page in satellite.

Additional info:
We have reproduced same on 6.2.12, 6.2.13 and 6.3.0 and we are getting the same error. While reproducing the issue we added some more resource types just confirm the permission details but we got the same error.
