**Pull request:** [https://github.com/theforeman/foreman/pull/5851](https://github.com/theforeman/foreman/pull/5851)

**Description**

Cloned from [https://bugzilla.redhat.com/show_bug.cgi?id=1602747](https://bugzilla.redhat.com/show_bug.cgi?id=1602747)

**Description of problem:**

this is a regression from sat6.3.

User is no longer able to filter subnet-related audits using type field:

Invalid search query: `auditable_type` should be one of 'role, ptable, provisioning_template, filter, hostgroup, katello/repository, smart_proxy, katello/host/content_facet, katello/host/substitution_facet, remote_execution_feature, lookup_value, model, domain, realm, environment, architecture, image, usergroup, job_template, bookmark, hostgroup_class, puppetclass, medium, job_invocation, ansible_role, discovery_rule, katello/activation_key, katello/content_view, katello/kt_environment, katello/host_collection, katello/sync_plan, katello/capsule_lifecycle_environment, katello/content_view_component, katello/content_view_environment, katello/content_view_puppet_module, katello/content_view_version, katello/gpg_key, katello/product, foreman_virt_who_configure/config, foreman_openscap/policy, foreman_openscap/scap_content, foreman_openscap/tailoring_file, compute_profile, config_group, config_group_class, ssh_key, compute_attribute, host_class, host_config_group, http_proxy, key_pair, personal_access_token, auth_source, compute_resource, host, interface, location, os, organization, override_value, partition_table, smart_class_parameter, smart_variable, parameter', but the query was 'subnet'
