In production webpacked_plugins.js_for $PLUGIN doesn't load the js if the plugin doesn't provide the sources

On nightly production install some components from foreman_ansible were not showing on the page. The issue was webpack_package_plugins.js ignored plugins which didn't provide "webpack/index.js" in their root even though the plugin provided the precompiled assets.

Also webpacked_plugins.js fails silently if it can't find the required js
