**Description**

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1613740

**Description of problem:**

Version-Release number of selected component (if applicable):
Build : Satellite 6.3.0 snap16

**How reproducible:**

Steps to Reproduce:
1. On RHV have two DC, 1 with Vms and other one empty
2. Create a RHV compute resource with APIv4 selected and empty DC
3. Go to Compute resource -> VM tab

Actual results:
It listed all the VM's from other DC

Expected results:
It should only list VM present under the DC it was configured to and not all DC's

**Additional info:**
DC = Datacenter

**Associated revisions**

Revision b6406cd7 - 08/30/2018 05:55 PM - Ori Rabin
Fixes #24564, #24746 - bump version of fog-ovirt

Now clusters shown for ovirt are only those in the datacenter. Associate VMs for API v4 was fixed by changing filter to only add pagination when needed.
