Pull request: https://github.com/theforeman/foreman/pull/5945

Fixed in Releases: 1.20.0

Description

In Ovirt, Instance types have default values for cores, sockets, memory, and HA. So When creating a new Ovirt Host, It shouldn't be possible to choose cores, sockets, memory, HA and also set instance type as tiny.

Only if custom instance type is selected, then it would be possible to edit the following values: cores, sockets, memory, HA, otherwise this values should be disabled.
