Pull request: https://github.com/theforeman/foreman/pull/6552
Fixed in Releases: 1.22.0
Found in Releases:

Description
Description of problem:
Error when creating a new Content Host using VMWare Compute Resource. The network information coming from Compute Profile appears to be correct on the webUI but when submitted generate an error (and then we are able to see a diff dvport group as expected)

Version-Release number of selected component (if applicable):
1.18.0

Steps to Reproduce:
1. Create a Compute Resource
2. Create a Compute Profile
3. Create a Hostgroup
4. Create a new Content Host and use the hostgroup

Actual results:
Seeing selected different network in the modal window, than in the network table.

Expected results:
See the same network in both - modal and the network table.

Fixes #26280 - preserving selection of related network (#6552)

History
#1 - 03/08/2019 01:12 AM - Ondřej Ezr
- Bugzilla link set to 1660258
- Description updated

The problem relies in the magical selection of a network by function selectRelatedNetwork after triggering it on non active modal.
