Description
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1692753

Description of problem:
After adding a a compute resource from API, and changing its location via PUT request, just navigating the organisation from UI makes Foreman crash, and also reset the ssl certs

Video link: https://drive.google.com/file/d/1rvd-aX9-D7piO3_szR0VdbASGGGrHpZZ4/view?usp=sharing
Check the video for more info

Version-Release number of selected component (if applicable):
master of kubevirt plugin

How reproducible:
Not always, but many times, was able to reproduce 5+ times

Steps to Reproduce:
1. Add a Compute resource from API
2. Change its location via a PUT call
3. Navigate through organisation in UI

Actual results:
Crashes Foreman and resets SSL Certs in Client Browser

Expected results:
Should show the Compute resource correctly without crashing

Additional info:

Fixes #26754 - Change error when updating nested resource fails

History
#1 - 05/07/2019 01:05 PM - Shira Maximov
- Category deleted (19)

Description:
1. updating a compute resource with a location_id that doesn't exist send a wrong error message: {
   "compute_resource": {
   "location_ids": [5]
   }
}
"Compute resource doesn't exists" instead "Couldn't find Taxonomy with 'id'=[5]"

2. Location_id description is not very clear
