The `--fields` option lacks help

The `--fields` option accepts field names or predefined sets. It is not clear what values are available and what fields are printed for specific sets.

I'd love to see some help extension when `--fields` is defined on the command showing e.g. table like:

Currently it is not visible for a user what fields are in which sets. I'd love to see some help extension when `--fields` is defined on the command showing e.g. table like:

Options:

```
--fields FIELDS Show specified fields or predefined field sets only. (See below)
```

Predefined field sets:

```
+--------+-----+---------+------+
| Fields | ALL | DEFAULT | THIN |
+--------+-----+---------+------+
| Id     | x   |   x    |   x  |
| Name   | x   |   x    |   x  |
| Param1 | x   |   x    |     |
| Param2 | x   |       |     |
+--------+-----+---------+------+
```
