### Description

**Description of problem:**

satellite-installer shows yum transaction log for 'rh-mongodb34-syspaths'

**Version-Release number of selected component (if applicable):**

Satellite 6.6 snap 1

**How reproducible:**

Steps to Reproduce:

1. Install fresh Satellite.
2. Run Satellite-installer as below:

   ```
   [root@qe-sat6-bm1 yum.repos.d]# satellite-installer --scenario satellite
   Installing               Done                                           [100%] [..........................................................]
   Success!   * Satellite is running at https://qe-sat6-bm1.lab.eng.rdu2.redhat.com
   
   To install an additional Capsule on separate machine continue by running:
   
   capsule-certs-generate --foreman-proxy-fqdn "$CAPSULE" --certs-tar "/root/$CAPSULE-certs.tar"
   ```

3. To upgrade an existing 6.4 Capsule to 6.5:

   Please see official documentation for steps and parameters to use when upgrading a 6.4 Capsule to 6.5.

   The full log is at /var/log/foreman-installer/satellite.log

   ```
   yum install -y -q rh-mongodb34-syspaths finished successfully!  <--------
   [root@qe-sat6-bm1 yum.repos.d]#
   ```

**Actual results:**

yum transaction log shows as => 'yum install -y -q rh-mongodb34-syspaths finished successfully!'

**Expected results:**

Yum transaction output should not show
