Description
To enable ansible-runner implementation being an default option, we need to depend on the 'ansible-runner' package. For now, we need to depend on third party repository for that.

Revision fe035de6 - 07/29/2019 04:40 PM - Ondřej Ezr
Fixes #27264 - Install ansible-runner package when installing ansible

This installs ansible-runner by default when installing the Foreman Proxy Ansible plugin. Because it's not in EPEL or Debian, additional repositories are enabled. For users who sync repositories, there's a switch to disable those. Since it's all optional, there's also a switch to disable the installation altogether.
