execute MongoDB upgrade by using below command

1. satellite-installer --upgrade-mongo-storage-engine

But Mongo DB upgrade get failed with undefined local variable or method `katello' for #<Kafo::HookContext:0x0000000244e920> (NameError).

And Satellite log look like below.

[ INFO 2019-07-19T04:42:51 main] All hooks in group pre_values finished
[ INFO 2019-07-19T04:42:51 main] Installer finished in 1.66178942 seconds

Version-Release number of selected component (if applicable):
6.6.0 snap 11

How reproducible:
100

Steps to Reproduce:
1. satellite-installer --upgrade-mongo-storage-engine
2.

Actual results:
See above

Expected results:
MongoDB is migrated from MMAPv1 to WiredTiger

Fixes #27357 - properly check for katello scenario

In ff1434a3a39fd2b0bd3d35c8103546014eefb6b96b we removed the 'katello' var
that contained "is this running with katello enabled" fact, but only
replaced one of the two uses of said var in the code.

This commit also updates the second place to use
'module_enabled?('katello')' directly
