**Description**

**Steps to Reproduce:**

1. While running the Satellite installer provide the proxy password with special character at starting, for example @redhat

```
Stage[main]/Foreman::Database/Foreman::Rake[db:seed]/Exec[foreman-rake-db:seed]: Failed to call refresh: '/usr/sbin/foreman-rake db:seed' returned 1 instead of one of [0]
```

2. It will fail on dbseed with below error:-

```
rake aborted!
Psych::SyntaxError: (unknown): did not find expected whitespace or line break while scanning a tag at line 40 column 16
```

3. After executing the dbseed manually we will see that dbseed will fail with below error:-

```
rake aborted!
```

4. Here dbseed is referring to /usr/share/foreman/config/settings.plugins.d/katello.yaml file which has password with special character and as a result it is failing.

03/19/2022
Actual results:

Installer fails with below error:

/Stage[main]/Foreman::Database/Foreman::Rake[db:seed]/Exec[foreman-rake-db:seed]: Failed to call refresh: 
'/usr/sbin/foreman-rake db:seed' returned 1 instead of one of [0]

Revision 1b88391e - 09/18/2019 12:20 AM - Ewoud Kohl van Wijngaarden
Fixes #27845 - quote values in katello.yaml

Some values may contain special characters that have a meaning in YAML. By quoting this is avoided.
