Report which users access the API

I'm able to query user access to Satellite using /api/v2/users and able to get last_login_on value, however, this only seems to record when a user accesses the GUI. I'm looking to see if there is a way to record when a user accesses API as well.

Expected results:
Run a report to track which user accounts are accessing the API.

Additional info:
Customer is looking to implement a "use it or lose it" policy for accessing the API.

- Subject changed from Report which users access the API to Report which users access the API

I actually think this means 2 things:
1) update last login info on user object when credentials are used in API (totally reasonable to me)
2) add a report on users that prints this info (trivial)
