**Description**

currently the returned payload is a mix of data and payload, looks like: `(payload: { ...payload, ...data })` which is quite risky and not the best approach to handle API responses, in this refactor I will split it into results and params, as params are the values which was passed to the API request, it will look something like this: `(payload: { results: data, params: payload })` in the API middleware.

Revision 57c6f203 - 01/01/2020 08:59 AM - Ron Lavi

Fixes #28584 - refactor API middleware payload

split the response and payload which are passed from the middleware to the reducers.
