When creating a new OS, I can not assign provisioning templates

A regression introduced in #22269

Related to Foreman - Bug #22269: Operating system templates are ordered inconsistently in UI.

Revision 129eae8a - 01/16/2020 03:30 PM - Marek Hulán

Fixes #28737 - fix template assignment in OS form

This fixes a regression introduced in #22269 when we started to sort template kinds in OS form. It relied on sorting fields using database, but for newly created OS, we build new objects in memory only, based on which we generate the form.

This now checks if there's at least one unsaved OsDefaultTemplate object in collection proxy and if it is, we sort template kinds in Ruby. If all objects are persisted, we can improve efficiency by relying on SQL as we did before.
