# Description

Cloned from [https://bugzilla.redhat.com/show_bug.cgi?id=1733241](https://bugzilla.redhat.com/show_bug.cgi?id=1733241)

## Description of problem:

Subnets and the templates that are configured in the parent location should also be visible in "hammer location info --name child_location". Unlike it shows correctly in GUI.

## Version-Release number of selected component (if applicable):

6.5

## How reproducible:

100%

## Steps to Reproduce:

1. Create a parent and child location on GUI.
2. Create a subnet under parent and another subnet under child location.
3. Now get the information of location through hammer.

   1. `hammer location info --show-hidden-parameters yes --name child_location`  
      ---> It will show subnet which is associated only with child_location.

   1. `hammer location info --show-hidden-parameters yes --name parent_location`  
      ---> It will show subnet which is associated only with parent_location.

## Actual results:

1. `hammer location info --show-hidden-parameters yes --name child_location`  
   ---> It will show subnet which is associated only with child_location.

1. `hammer location info --show-hidden-parameters yes --name parent_location`  
   ---> It will show subnet which is associated only with parent_location.

## Expected results:

Manage Locations >> Parent_Location >> Subnets  
 ---> It will show both subnets under parent & child location.

Manage Locations >> Child_Location >> Subnets  
 ---> It will show both subnets under parent & child location. As inherited from parent.

The above behavior should also be reflected by hammer/API.
Additional info:
The same behavior has been observed for provisioning template as well.
