- Has duplicate Feature #4243: Add commands for Foreman settings added
Please provide management of Foreman settings.

I plan to extend my SaltStack Formula (https://github.com/bechtoldt/foreman-formula) to manage Foreman settings after Foreman installation.

Just as a note, this is very easy to do if you know a little Ruby, e.g take a look at https://github.com/huit/astapor/blob/master/bin/seeds.rb

Still a means to do this from hammer would be appreciated.
