Unable to update default value of a smart class parameter (Sql query error).

hammer sc-param update --id 3086 --default-value \["ntp3.csv.local iburst trust","ntp4.csv.local iburst"]

Could not update the parameter:
PG::ProtocolViolation: ERROR:  invalid message format

Version-Release number of selected component (if applicable): Satellite 6.6

Actual results: Fails to update default value of smart class parameter.

Expected results: Should able to update default value

It seems the above query fails due to SQL query constructed with large arguments(around 2.7L parameters) and it fails to execute.
