### Description
Currently we have all the settings (both changed and unchanged) in the database, but we have all the defaults in code as well, so it makes no sense to have quite a heavy code base to keep both in sync. Instead I'd like to bring the setting inventory into memory and database would keep only the changed settings.

It should give as an easy way for plugins to extend settings category not just adding a new one.

### Subtasks:
- Refactor #30860: Create SettingPresenter as a proxy for setting UI values  
  - Status: Closed
- Refactor #30861: Move setting value collections to SettingPresenter  
  - Status: Closed
- Feature #30862: Introduce SettingRegistry as a setting inventory  
  - Status: Closed
- Refactor #31471: Deprecate setting timestamps in API responses  
  - Status: Closed
- Feature #32286: Create a new setting definition DSL  
  - Status: Closed
- Refactor #32287: Load Setting index page from memory registry  
  - Status: Closed
- Refactor #32403: Add custom validations to new setting DSL  
  - Status: Closed
- Refactor #32408: Use new DSL to define settings  
  - Status: Closed
  - Refactor #11836: Rename Puppet settings to Configuration  
    - Status: Closed
- Refactor #32893: Use new DSL to define General settings  
  - Status: Closed
- Refactor #33589: Use new DSL to define Authentication settings  
  - Status: Closed
