Foreman - Feature #30247

Option "Destroy associated VM on host delete" should be disabled by default.

06/30/2020 09:19 AM - Marek Hulán

Pull request: https://github.com/theforeman/foreman/pull/7789

Fixed in Releases: 2.2.0
Found in Releases: 2.2.0

Description
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1804669

Description of problem:
This is really important, some times we get scenario where some content hosts were removed from vCenter after the customer just remove the CH from Satellite webUI. We already know the warning, however, the customer believes that will be related only to Satellite webUI. This feature is really interesting, however, should be disabled by default and once the customer is aware of how this work, they could switch easily.

Version-Release number of selected component (if applicable):
6.7

How reproducible:
100%

Steps to Reproduce:
1. Configure the Compute Resource
2. Create a new VM
3. Delete the CH via Satellite webUI

Actual results:
The machine will be removed from vCenter (or external virtualization resource)

Expected results:
Remove only from Satellite side (db, webUI)

Fixes #30247 - do not delete VMs by default

We've seen multiple users deleting their VMs when they deleted host in Foreman. That still seems to be very unexpected especially in case of unmanaged hosts. It's safer to keep the VM and delete it only if users explicitly want to.

This changes the default behavior and we'll need to cover that in release notes. However it probably causes less pain than having VMs running and consuming resources, when people forget to destroy them.
