Description
When launching the VMWare console from foreman by pushing "Launch Console" in the web browser the console is actually launched but the launching process in the browser is never finished e.g. the button changes to "Opening VMWare console" with rotating circles for indefinite time.

Steps to Reproduce:
1. Click on a host
2. Click on "Console"
3. Click on "Launch Console"

Actual results:
The button "Launch Console" changes to "Opening VMRC Console ...", opens a console but remains in this state and never changes back to "Launch Console" after opening the console.

Expected results:
The button "Launch Console" changes to "Opening VMRC Console ...", opens a console and changes back to "Launch Console".
