Foreman - Refactor #30817

Remove explicit directories from Puppet provisioning setup snippet

09/10/2020 02:19 PM - Ewoud Kohl van Wijngaarden

Description
Puppet has built in defaults for paths, at least for the AIO packages. It's not needed to set these in puppet.conf.

 Fixes #30817 - Remove AIO dirs in puppet.conf

In Puppet's AIO package the default puppet.conf doesn't contain any of these directories so it's not needed to set them.

I confirmed this on CentOS 7 with Puppet 5 and 6 as well as on Debian 10 with Puppet 6. Since Puppet 4 is EOL, there's no need to test that. It's to be expected that Puppet 7 will also not need these directories.

I've left in puppet.conf on Windows and non-AIO. On Debian non-AIO some directories are still set and I can't verify other platforms.

The digest_algorithm on FIPS is not needed since Puppet 5.4.0. Anything older is EOL so it can be safely dropped.
