Description

Revision fdc20de5 - 03/08/2021 06:16 PM - Ewoud Kohl van Wijngaarden
Fixes #31834 - Use PostgreSQL 12 on EL8

This aligns Red Hat 7 and Red Hat 8 on PostgreSQL 12. It uses the a specific git commit for DNF module support but without dropping Puppet 5 to allow for a cherry pick to 2.4. After develop drops Puppet 5 support, it should switch to >= 7.0.1 as a version specifier.

It may break existing installations on PostgreSQL 10 since there is no upgrade path. Those users are recommended to set version to 10 in their custom-hiera.yaml or upgrade to PostgreSQL 12.

#7 - 03/10/2021 05:33 PM - Ewoud Kohl van Wijngaarden
- Triaged changed from No to Yes
- Target version changed from 2.4.0 to 2.5.0

Due to the complexities involved and the timeline, this can't make the 2.4 release cycle anymore. There was a consideration to only perform it for Katello but given the Katello pipeline is broken since January 26th, there's no way to verify it actually works. Holding up the Foreman release for that is not a good idea.
