Description
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1967066

Description of problem:
[global registration] - default packages are overridden by host package even if not specified registration form (-force should work)

Version-Release number of selected component (if applicable):
Satellite 6.10 snap 2

How reproducible:
always

Steps to Reproduce:
1. fill the registration form with filling the package name e.g. php
2. generate the registration command
3. register host with command
4. now fill the 'host packages' parameter in the organization e.g. vim emacs mlocate
5. reregister the host again with --force option check

Actual results:
Host get registered with installing old packages

Expected results:
Host should get re-registered with installing default packages

Additional info:
--force should clean the host package parameter from the host if not overridden
