Revision 8889aad5 - 10/28/2021 12:53 AM - Adam Ruzicka

Fixes #33789 - Mark host where the installer is running as foreman when deploying foreman.

This introduces three new resources. foreman_host represents a host record in Foreman. foreman_instance_host can be used to mark an already present foreman_host as a foreman instance. foreman_smartproxy_host works similarly, but marks an already present foreman_host as a host forming already existing foreman_smartproxy.
