**Description**

This setting was added to handle some migrations back in 2014 and isn't really used anywhere else. We can safely drop it.

Fixes #33906 - Drop fix_db_cache setting

This setting was introduced when the current permissions model was introduced in Foreman 1.7 to allow recreating the user permissions cache after the migration from the previous model. The setting has no other uses.

If a user wants to manually recreate the permissions cache for some reason, the rake task remains available, but it is no longer programatically executed.

The migration converting the permissions from the old model to the new one has been emptied, on a new install there will not be any permissions in the old model and any upgrades will have already executed this migration by now.
