Description

In Katello 4.2 hammer gained new parameters to "capsule content synchronize": --content-view and --repository.

However, for that to work, hammer needs a fresh apidoc, and it seems that wasn't generated.

From the upgrade log:

```

I would expect to see the following line:

```
[DEBUG ] [configure] Executing with uid=foreman: '/usr/sbin/foreman-rake apipie:cache:index'
```

Environment:

- CentOS 7
- puppet-agent-6.25.1-1.el7.x86_64

Steps to reproduce:

- Install Katello 4.2
- yum localinstall https://yum.theforeman.org/releases/3.1/el7/x86_64/foreman-release.rpm
- https://yum.theforeman.org/katello/4.3/katello/el7/x86_64/katello-repos-latest.rpm
- foreman-maintain service stop
- yum upgrade
- foreman-installer
- hammer --reload-cache capsule content synchronize --help → no --content-view
- foreman-rake apipie:cache:index
- hammer --reload-cache capsule content synchronize --help → --content-view now present

Fixes #34161 - Run apipie:cache:index after db:migrate

With Puppet you can write:

```
Class['A'] ~> Class['B'] ~> Class['C']
```

This implies Class['A'] ~> Class['C'] and rspec-puppet actually will tell you that chaining is there, but it doesn't actually happen. This was reported in [https://github.com/rodjek/rspec-puppet/pull/821](https://github.com/rodjek/rspec-puppet/pull/821).

In this particular case it means that if DB seeding doesn't happen then the apipie caches indexes aren't refreshed. By chaining it to db:migrate there's a much bigger chance it actually happens.

Normally apipie:cache:index needs to run after a package is updated so ideally this would actually be done in packaging, but this is the workaround we've been using for a long time.

- Target version set to 3.1.1
- Category set to Foreman modules

This is affecting Foreman 3.1 and blocking Katello 4.3's pipelines. It should be cherry picked.
