Target version:
Difficulty:
Triage: No
Bugzilla link:

Description
Ovirt 3.3.1 (Local storage)  Foreman 1.3.1

Steps to reproduce:
- Create a host using Ovirt (Foreman will provision it successfully)
- Clone previously created host.
- New host wont detect disk and it (the disk) will show as illegal state on Ovirt gui and it wont remove.

This won't happen if the new host is created via new host button instead of cloning.
