Description
In essence it is to add a virtual cd drive to a created vm via fog on vmware (possible others aswell). Reason is so a bootdisk created via the foreman_bootdisk plugin, however a host created via foreman default does not have a cd/dvd drive.

Via foreman_hooks the generation of this disk can already be done and possibly also transfered to the vmware host, but I can not seem to get the inclusion of the cd drive at build to work on my own.

CD drive is also needed for installing VMware Tools.

#6 - 10/27/2014 11:49 AM - Anonymous
Zak, that's not strictly needed, I'm using OS packages for VMware Tools all the time and as it turned out, that's even 100% supported by VMware. If you want, I can share my puppet and provisioning snippets for that.

I know it's not ideal but I'm currently installing VMware tools manually from VM console which does require the CD.

Automating the install is something that still needs to be done so I'm definitively interested in what you can provide. My contact information is available in my profile.

#8 - 05/20/2016 10:07 AM - The Foreman Bot
- Status changed from New to Ready For Testing
- Assignee set to Timo Goebel
- Pull request https://github.com/theforeman/foreman/pull/3540 added

#9 - 05/24/2016 11:02 AM - Anonymous
- Status changed from Ready For Testing to Closed
- % Done changed from 0 to 100

Applied in changeset 34190ceefeed37b4e992eb5d95af20b08704d060.
