Hammer CLI - Bug #4311
Name searches don’t work when there are other parameters in the search route

Search by name works fine when the resource is searchable globally. Eg.

```
hammer architecture info --name i386
# hits /api/architectures?search= ...
```

The problem occurs when the name must be searched in scope of some other resource, eg. org:

```
hammer sync_plan info --name test --organization-id ACME_Corporation
# hits /api/organizations/ACME_Corporation/sync_plans?search= ...
```

The search function doesn't have access to the organization id and the api call fails with "missing parameter" exception.
