**Description**

In katello, we need a mechanism to filter out certain parameters from logging because they are causing the log to fill up with unreadable text:

Processing by Katello::Api::V2::ContentUploadsController#create as application/json;version=2
Parameters: {"api_version"=&gt;"v2", "repository_id"=&gt;"17", "content_upload"=&gt;[]}

It would be nice to be able to filter by request url since we don't want to filter out the param from being logged across the entire application.

Revision cb49ec82 - 07/11/2014 02:36 AM - dustin tsang
fixes #6441 - allows filtering of parameters per controller

There is an issue where certain parameters for particular controllers are causing the log to fill up. This allows the ability to filter parameters by controller.

This allows each controller to add additional parameters to filter.

In a controller, to filter parameters name and description, you can add the following:

include Foreman::Controller::FilterParameters
filter_parameters :name, :description
History

#1 - 06/30/2014 10:43 AM - Dominic Cleal
- Category set to Plugin integration
- Status changed from New to Ready For Testing
- Assignee set to dustin tsang
- Target version set to 1.8.1

https://github.com/theforeman/foreman/pull/1548 I presume.

#2 - 07/07/2014 07:25 AM - Dmitri Dolguikh
- Target version changed from 1.8.1 to 1.8.0

#3 - 07/11/2014 03:01 AM - dustin tsang
- Status changed from Ready For Testing to Closed
- % Done changed from 0 to 100

Applied in changeset cb49ec827efed8197791b0c58c781d41a5e43f51.

#4 - 07/11/2014 03:41 AM - Dominic Cleal
- Legacy Backlogs Release (now unused) set to 10
