Using foreman 1.7.0-1 with puppet 3.7.3-1 in Centos 6.6 64bit, throws an error when I click Setup Provisioning button in my dashboard.

The scenario to replicate the error,

1. Centos 6.6 64bit with current updates
2. `rpm -ivh http://yum.puppetlabs.com/puppetlabs-release-el-6.noarch.rpm`
   `rpm -ivh http://dl.fedoraproject.org/pub/epel/6/x86_64/epel-release-6-8.noarch.rpm`
   `yum -y install http://yum.theforeman.org/releases/1.7/el6/x86_64/foreman-release.rpm`
3. `yum -y install foreman-installer`
4. Login to web UI and then click Setup Provisioning

Please contact me for further logs and others.

Hi,

Can you please additional information, by using foreman-debug or supply the full trace (either log files or the full trace in the UI)
